9. Methodology

The valuation report is generated using the Mumbai House Price Prediction machine learning pipeline. The project uses cleaned property data, engineered features and a trained Random Forest Regression model to estimate property prices. The system additionally incorporates property intelligence, price-per-square-foot comparison, locality-level analysis, anomaly detection, prediction history and model performance metrics. The estimated price should be interpreted as a machine-learning estimate based on the available dataset and model features. It should not be treated as a guaranteed transaction price.

10. Disclaimer

This report is generated automatically by the Mumbai House Price Prediction system. The estimated property value is based on historical training data and machine-learning predictions. Actual market prices may differ due to property condition, building quality, exact location, amenities, legal status, market conditions, negotiation, demand and other factors that may not be fully represented in the dataset. This report is intended for analytical and informational purposes only and should not be considered a legal, financial or real estate appraisal.
